

ENERGY & WATER MANAGEMENT PROGRAM

REDUCE ENERGY WASTE

Make sure to **close outside doors** behind you and **tell an adult if a door is left propped open.**

This will help reduce our energy footprint by keeping temperature controlled air inside our school.

Our cooled and heated air can escape through open doors to the outside.

REDUCE WATER WASTE

Fill up your **reusable water bottle** with tap water instead of buying single use plastic bottles.

It takes about 3 liters of water to package 1 liter of plastic single-use bottled water

REMEMBER: If you see a water leak or an open outside door, tell an adult!

The City of Charlottesville Energy and Water Management Program is here to help reduce your school's energy and water footprint. Each season, we will focus on new energy and water conservation strategies, education and tips!
